PROFESSIONAL SUMMARY

Motivated Software Testing fresher with knowledge of Selenium WebDriver, Java, Python, Manual Testing, SQL, TestNG, Maven, and Git. Skilled in creating test cases, executing functional and regression tests, identifying defects, and automating web application test scenarios. Strong understanding of SDLC, STLC, defect life cycle, and Agile methodologies, with a keen interest in building a career in QA and Automation Testing.

SKILLS

Programming Languages: Java, Python, SQL
Database: MySQL, SQL
Automation Testing: Selenium WebDriver, TestNG, PyTest, Selenium Grid, REST Assured, Postman
Version Control: Git, GitHub
Testing: Manual Testing, Functional Testing, Regression Testing, Integration Testing, System Testing, API Testing
Web Technologies: HTML, CSS, JavaScript
Frameworks & Tools: Maven, Git, GitHub, GitHub Actions, Jenkins, Postman
Development & Testing Concepts: SDLC, STLC, Defect Life Cycle, Agile/Scrum
IDE & Platforms: IntelliJ IDEA, VS Code

RELEVANT EXPERIENCE

Jan 2024 - May 2025

College Internship

- Developed an **AI-powered chatbot** application using **Python**, **JavaScript**, and **Node.js**, enabling users to interact with an intelligent conversational system.
- Integrated the **Google Gemini API** to generate AI-based responses and handle user queries through a conversational interface.
- Designed and managed application data using **MySQL**, including storing and retrieving relevant user and chatbot information.
- Developed backend APIs using **Node.js** to manage **client requests**, API integration, and communication between the application and database.
- Tested application functionality, API responses, and user interactions to identify and resolve issues.
- Deployed the chatbot application using **AWS** and validated its functionality in a production environment.

PROJECTS

Self-Healing Selenium Framework | GitHub

Oct 2026

- Built a **Selenium**, **Java**, and **TestNG** framework that recovers from broken locators using ordered fallback strategies and weighted **similarity scoring**.
- Added safety checks that refuse low-confidence or ambiguous matches, catching a reused ID on a "Delete account" button instead of clicking it.
- Generated HTML/JSON healing reports with before and after screenshots; 13 unit and UI tests run in headless Chrome on **GitHub Actions** CI.

API Automation Framework – REST Assured & Postman | GitHub

Oct 2026

- Automated the Restful Booker API with **REST Assured**, Java, and TestNG, covering authentication, full CRUD flows, filtering, and negative tests.
- Validated responses with **JSON Schema** and POJO serialization (Jackson); ran data-driven tests from JSON with ExtentReports.
- Ran REST Assured and a **Postman/Newman** collection in CI; traced an HTTP 418 CI failure to a wrong Accept header and fixed it.

E-commerce Application – Selenium Testing Project

Aug 2026 – Present

JSpider, Marathahalli, Bengaluru

- Developed and executed automated test cases for an e-commerce application using Selenium WebDriver, Java, and TestNG.
- Tested key functionalities including login, product search, cart, and checkout.
- Used XPath, CSS Selectors, and Page Object Model (POM) for automation.
- Performed functional and regression testing, identified defects, and documented test results.
- Used MySQL for basic database validation and Git/GitHub for test code management.
- Followed SDLC/STLC and Agile testing practices to ensure application quality and reliable test execution.

EDUCATION

June 2026

East Point of Engineering and Technology

Bachelor of Engineering Technology, Computer Science

Related Coursework: Database Systems, Computer Science, Operations Management, Artificial Intelligence Software Development
CGPA: 6.90/10.00
